

## Class 240 Aromatic Polyimide Tape Covered Bare Square Aluminum Magnet Wire

**Table1 Specifications**

|                      |                         |
|----------------------|-------------------------|
| Insulation Material  | Aromatic polyamide tape |
| Heat Rating          | 240                     |
| Bare Wire Dimensions | Awg 1/0 – Awg14         |
| Standard             | MW 64-A                 |

**Table 2 Properties**

|                          |   |
|--------------------------|---|
| Adhesion and Flexibility | No loss of adhesion between tape and conductor or between tape layers   |
| Springback               | Not more than 5.5°  |
| Dielectric breakdown     | Not less than 1000 V/mil (39370 V/mm) of the smallest thickness on one side of the tape cover (half the minimum increase) |

### Features:

High temperature stability

High insulation resistance

Radiation resistance

Aging resistance

Good processing performance

## Class 240 Aromatic Polyimide Tape Covered Bare Square Aluminum Magnet Wire

**Table 3**

**Dimensions for Tape-Covered Square Magnet Wire (mm)**

| AWG Size | N=2                          |                          |                              |                          |                              |                          | N=3                          |                          |                              |                          |                              |                          |
|----------|------------------------------|--------------------------|------------------------------|--------------------------|------------------------------|--------------------------|------------------------------|--------------------------|------------------------------|--------------------------|------------------------------|--------------------------|
